

IPO Chart		
Input	Process	Output
When user enters the website the log-in page loads first. User can fill in log-in form and click the “next” button	Website validates information inputted and user is logged in	User is redirected to the homepage
User clicks “create account?” button from log-in page	Registration page loads	Registration page is displayed
User Fills in registration form and clicks the “next” button	Website validates information inputted and user is logged in	User is redirected to the homepage
User clicks “Home” button from the homepage	Homepage loads	Homepage is displayed
After user completes log-in/registration	Homepage loads	Homepage is displayed
User clicks “more” button from the homepage	About Us page loads	About us page is displayed
User clicks “About us” button from the navigation bar	About Us page loads	About us page is displayed
User clicks “Missing Pet” from navigation bar	Missing Pet page loads	Missing pet page is displayed
User fills in missing pet details, uploads a photo and clicks “send” button	Website validates information and pet information is uploaded	User is redirected to the notification centre
User clicks “notification centre” from navigation bar	Notification Centre page loads	Notification Centre page is displayed
User clicks arrow button in Notification Centre Carousel	Missing Pets carousel cycles	Different Carousel slides through different events/updates notifications are shown
User clicks “Adopt Me” from navigation bar	Adopt Me page loads	Adopt Me page is displayed
User clicks on a local shelter	Loads adoptable pet page	Adoptable pet page is displayed
User fills in contact detail form for adopting animal and clicks “send” button	Contact details are submitted	User is redirected to Adopt Me page
User clicks “Apply Here” from navigation bar	Volunteer form page loads	Volunteer form page is displayed
User must check all checkboxes and fill in contact details and click “submit” button	Volunteer form application is submitted	An “Application Submitted” confirmation overlay appears
User clicks “Contact Us” from navigation bar	Contact Us page loads	Contact Us page is displayed
User fills in contact us form and clicks “send” button	Message is sent	A “Message sent” confirmation overlay appears
User clicks Settings icon from navigation bar	Settings page loads	Settings page is displayed
User hovers over link	N/A	Link changes colour

User hovers over button	N/A	Button changes background colour
User uses the website on a smaller screen	Page adjusts according to screen size	Responsive UI

Test Cases				
Test	Expected Output	Actual Output	Pass/Fail	Notes
Login Page				
Login and registration redirection	When a user logs in or register an account, they are redirected to the homepage	When a user logs in or register an account, they are redirected to the about us page	Fail	In the provided script.js file the Aboutus.html file is linked not the Homepage.html
Log-in form filled with valid credentials	User is logged in	User is logged in	Pass	N/A
Log-in form with no credentials inputted	Website indicates that the empty fields needs to be filled in	Website indicates that the empty field needs to be filled in	Pass	When no credentials were inputted, the empty field was highlighted with “please fill in this field”. When just the name was filled in, the empty password field became highlighted. When the password was filled in, the empty name became highlighted aswell
User clicks “create account?” button from log-in page	Registration page is displayed	Registration page is displayed	Pass	N/A
Register Page				
Registration form filled with valid credentials	User is registered	User is registered	Pass	N/A
Registration form filled with invalid credentials	User is not registered	User is not registered	Pass	When the email address is not written in the correct format the user is not able to register. This is because the input type is email thus providing a pattern

Registration form with no credentials inputted	Website indicates that the empty fields need to be filled in	Website indicates that the empty fields need to be filled in	Pass	When no credentials were inputted, the empty field was highlighted with “please fill in this field”. When just the name was filled in, the empty password and email fields became highlighted. When just the password was filled in, the empty name and email fields became highlighted. When just the email was filled in, the empty name and password fields became highlighted.
General				
User hovers over button	Button changes background colour	Button changes background colour, and translates up (in some cases introduces a drop shadow)	Pass	The documentation did not mention any translation or drop shadows but they improve UX as they provide additional visual feedback along with the background colour changing, which could have used a more drastic colour change like the documentation. Not every button has the same hover styling which makes them a bit inconsistent (But all of them change background colour)
User hovers over link	Link changes colour	Link changes colour	Pass	Every link apart for Gmail in the footer changes colour. Although some information could have been links as well like the Instagram and Facebook (even

				though the accounts are not real could have at least redirected to a random account).
Homepage				
User clicks “Home” button from the navigation bar	Homepage page is displayed	Homepage page is displayed	Pass	Home button works from every page navigation bar
User clicks “more” button from the homepage	About us page is displayed	About us page is displayed	Pass	N/A
Homepage page responsiveness on smaller screens	Responsive UI	Responsive UI	Pass	N/A
About Us Page				
User clicks “About us” button from the navigation bar	About us page is displayed	About us page is displayed	Pass	About Us button works from every page navigation bar
About us page responsiveness on smaller screens	Responsive UI	Responsive UI	Pass	The page mostly does not break at smaller screens. Although at the smallest screen size the text overflows into the more button
<i>Not part of IPO</i>				
User presses “more button”	Scrolls to another section	Scrolls to another section	Pass	Leads to a video that adds to the about us
User presses play on video	Video starts playing	Video starts playing	Pass	N/A
Missing Pet Page				
User clicks “Missing Pet” from navigation bar	Missing Pet page is displayed	Missing pet page is displayed	Pass	Missing Pet button works from every page navigation bar
Missing Pet form filled with valid credentials	User is redirected to the notification centre	User is redirected to the notification centre	Pass	N/A
Missing Pet form with no credentials inputted	Website indicates that the empty required fields need to be filled in	Website indicates that the empty fields need to be filled in	Pass	The image required field works apart from when you press the back button after initially submitting the first time, the image is gone but if you press next with just the text filled in it proceeds

				without needing the image.
Missing pet page responsiveness	Responsive UI	Responsive UI	Pass	N/A
Notification Centre Page				
User clicks “notification centre” from navigation bar	Notification Centre page is displayed	Notification Centre page is displayed	Pass	Missing Pet button works from every page navigation bar
User clicks navigation arrow button in Notification Centre Carousel	Carousel slides through different events/updates	Carousel slides through different events/updates	Pass	N/A
Notification centre responsiveness on smaller screen	Responsive UI	Responsive UI	Pass	Once the screen is smaller than medium the arrows disappear, but the user can click the bottom indicator buttons
<i>Not part of IPO</i>				
User closes notification centre using the x icon	Leads to another page	Leads to another page	Pass	When the user closes the notification centre the user is redirected to the homepage
User clicks carousel indicator dot	Carousel slides to selected dot slide	Carousel slides to selected dot slide	Pass	N/A
User clicks Notification centre carousel card	Redirects user to respective page	Cards are not clickable	Fail	The hover effect on the cards make it seem that they are interactable.
Adopt Me Page				
User clicks “Adopt Me” from navigation bar	Adopt Me page is displayed	Adopt Me page is displayed	Pass	Missing Pet button works from every page navigation bar
User clicks on a local shelter	Adoptable pet page is displayed	Local shelter button does not work	Fail	The local shelter buttons are supposed to be clickable links as seen from the html code they are within an “a” tag. Instead of a link they have a # and no extra pages are found in websites folder which means the student did not have enough time to

				implement these pages.
Adopt me page responsiveness on smaller screens	Responsive UI	Not very responsive. Information is lost	Fail	Once the screen starts getting smaller the columns do not wrap into a new line but get lost within the container. This is because each button does not have a col class, making them not responsive.
User fills in contact detail form for adopting animal and clicks “send” button	User is redirected to Adopt Me page	There is no Adoptable pet page	Fail	No page to test
Apply Here Page				
User clicks “Apply Here” from navigation bar	Volunteer form page is displayed	Volunteer form page is displayed	Pass	Apply Here button works from every page navigation bar
User checks all checkboxes and fills in valid contact details and click “submit” button	An “Application Submitted” confirmation overlay appears	An “Application Submitted” confirmation overlay appears	Pass	N/A
User just fills in valid contact details and clicks “submit” button	Website indicates that the unchecked boxes need to be filled in	Website indicates that the unchecked boxes need to be filled in	Pass	This indication is for every unchecked box. Tested by keeping one of each of the boxes unchecked.
User just checks the checkboxes and clicks “submit” button	Website indicates that the empty required fields need to be filled in	Website indicates that the empty required fields need to be filled in	Pass	Each field was tested empty. Every single one is set as required
User checks all the checkboxes but fills in contact details with invalid credentials	User is not able to submit application	User is not able to submit application	Pass & Fail	When the email address is not written in the correct format the user is not able to register. This is because the input type is email thus providing a pattern
Apply Here page responsiveness on smaller screens	Responsive UI	Responsive UI	Pass	N/A
Contact Us				

User clicks “Contact Us” from navigation bar	Contact Us page is displayed	Contact Us page is displayed	Pass	Contact Us button works from every page navigation bar
User fills in contact us form with valid credentials and clicks “send” button	A “Message sent” confirmation overlay appears	A “Message sent” confirmation overlay appears	Pass	N/A
User fills in contact us form with invalid credentials and clicks “send” button	User is not able to send message	User is not able to send message	Pass & Fail	When the email address is not written in the correct format the user is not able to register. This is because the input type is email thus providing a pattern
Contact us form with no credentials inputted	Website indicates that the empty required fields need to be filled in	Website indicates that the empty fields need to be filled in	Pass	When no credentials were inputted, every empty field that was left empty highlighted with “please fill in this field”. Every field was tested and they are all set as required
About us page responsiveness on smaller screens	Responsive UI	Responsive UI	Pass	The page mostly does not break at smaller screens.
<i>Not part of IPO</i>				
User clicks on hoverable social icons	Link is opened	Nothing happens	Fail	The icons being hoverable makes them seem to be interactible
User click on hoverable email link	Opens mailto: link	Opens mailto: link	Pass	N/A
Settings				
User clicks Settings icon from navigation bar	Settings page is displayed	Settings overlay opens	Pass	There was no clear indication if a page or overlay opens. So technically a pass because some sort of settings is displayed
<i>Not part of IPO</i>				
User clicks Maltese language in settings	Text is translated into Maltese	Text does not change	Fail	This was not implemented
User clicks English language in settings	Text is translated into English	Text is translated into English	Pass	This is the default language
User presses show location button	Address of office is displayed	Address of office is displayed	Pass	N/A

User presses location again	Address collapses	Address collapses	Pass	N/A
User clicks anywhere on page while settings overlay is open	Settings overlay collapses	Settings overlay collapses	Pass	N/A
User clicks on settings while setting overlay is open	Settings overlay collapses	Settings overlay collapses	Pass	N/A
General				
Navigation bar responsiveness	Responsive UI	Not responsive	Fail	At a smaller screen the navigation bar breaks, the contact us button overflows to the right and the page now has horizontal scrolling because of this issue
Footer responsiveness	Responsive UI	Responsive UI	Pass	Responsive just the facebook and gmail icons are on a separate line than the text. This is because of the column size
User hovers over buttons	Button changes background colour	Button changes background colour	Pass	N/A
User hovers over navigation bar buttons	Change link colour	Change link colour	Pass	N/A
User hovers over footer link	Change link colour	Link stays the same	Fail	The link style and colour stay the same so the only way to know if the link is clickable is the cursor event and the underline under the link
User Zooms in	Responsive UI	Responsive UI	Pass	N/A
User Zooms out	Responsive UI	Responsive UI	Pass	N/A

HTML & CSS (& JavaScript) Validation

Aboutus.html

1. **Error** Bad value Settings icon.png for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 13, column 13; to line 13, column 69

```

```
2. **Error** Bad value logo findmypaw.png for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 14, column 13; to line 14, column 76

```

```
3. **Error** Bad value Multicolor Dog Rescue Adoption Promotional Event Marketing Video.mp4 for attribute src on element source: Illegal character in path segment. Space is not allowed.
From line 48, column 9; to line 48, column 108

```
<source src="Multicolor Dog Rescue Adoption Promotional Event Marketing Video.mp4" type="video/mp4">
```
4. **Error** Bad value logo findmypaw.png for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 86, column 9; to line 86, column 59

```

```

(Error/s. 1-4) The image filename has a space within which is not the proper naming convention which can lead to technical errors.

This can be avoided by removing the space or replacing it with a dash (-).

Adopt.html

1. **Error** Bad value Settings icon.png for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 13, column 13; to line 13, column 69

```

```
2. **Error** Bad value logo findmypaw.png for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 14, column 13; to line 14, column 76

```

```
3. **Error** Stray start tag: footer.
From line 103, column 1; to line 103, column 23

```
></body><footer class="footer">
```
4. **Error** Bad value logo findmypaw.png for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 133, column 9; to line 133, column 59

```

```

(Error/s. 3) The footer is being recognised as a stray start tag because the footer is placed outside of the body which is an invalid location.

This can be fixed by placing the footer within the body element

(Error/s. 1-2, 4) The image filename has a space within which is not the proper naming convention which can lead to technical errors.

This can be avoided by removing the space or replacing it with a dash (-).

Apply-Here.html

7. **Error** Bad value 'Dog with green bg.jpg' for attribute 'src' on element 'img': Illegal character in path segment. Space is not allowed.
From line 139, column 25; to line 139, column 107

```

```
8. **Error** Bad value 'dog&cat yellow bg.jpg' for attribute 'src' on element 'img': Illegal character in path segment. Space is not allowed.
From line 140, column 25; to line 140, column 102

```

```
9. **Error** Stray start tag 'footer'.
From line 165, column 1; to line 165, column 23

```
>></body>><footer class="footer">>
```
10. **Error** Bad value 'logo findmypaw.png' for attribute 'src' on element 'img': Illegal character in path segment. Space is not allowed.
From line 195, column 9; to line 195, column 59

```
>><
```
11. **Error** The heading 'h3' (with computed level 3) follows the heading 'h1' (with computed level 1), skipping 1 heading level.
From line 151, column 9; to line 151, column 12

```
>><h3>Applic
```

(Error/s. 11) h3 is written after h1 which means h2 was skipped. This breaks the document's semantics, which would affect any screen reader and search engine indexing. This can be fixed by replacing the h3 with a h2.

contactus.html

- no file selected
1. **Error** Bad value 'Settings icon.png' for attribute 'src' on element 'img': Illegal character in path segment. Space is not allowed.
From line 14, column 13; to line 14, column 69

```

```
 2. **Error** Bad value 'logo findmypaw.png' for attribute 'src' on element 'img': Illegal character in path segment. Space is not allowed.
From line 15, column 13; to line 15, column 76

```

```
 3. **Error** Bad value 'logo findmypaw.png' for attribute 'src' on element 'img': Illegal character in path segment. Space is not allowed.
From line 176, column 9; to line 176, column 59

```
>><
```

(Error/s. 1-3) The image filename has a space within which is not the proper naming convention which can lead to technical errors.

This can be avoided by removing the space or replacing it with a dash (-).

Createacc.html

1. **Error** Bad value Settings icon.png for attribute src on element `img`: Illegal character in path segment. Space is not allowed.
From line 16, column 13; to line 16, column 69
``
2. **Error** Bad value logo findmypaw.png for attribute src on element `img`: Illegal character in path segment. Space is not allowed.
From line 17, column 13; to line 17, column 76
``
3. **Error** Bad value Dog green bg.jpg for attribute src on element `img`: Illegal character in path segment. Space is not allowed.
From line 33, column 13; to line 33, column 50
``
4. **Warning** This document has heading elements but none of them has a computed heading level of 1.
From line 38, column 13; to line 38, column 16
`<h2>Create`

(Error/s. 1-3) The image filename has a space within which is not the proper naming convention which can lead to technical errors.

This can be avoided by removing the space or replacing it with a dash (-).

(Warning/s. 4) There is no h1 heading in the HTML document, which breaks the document's semantics. This can be solved by replacing the h2 with an h1

Homepage.html

1. **Error** Bad value Settings icon.png for attribute src on element `img`: Illegal character in path segment. Space is not allowed.
From line 13, column 13; to line 13, column 69
``
2. **Error** Bad value logo findmypaw.png for attribute src on element `img`: Illegal character in path segment. Space is not allowed.
From line 14, column 13; to line 14, column 76
``
3. **Error** The aria-label attribute must not be specified on any div element unless the element has a role value other than caption, code, deletion, emphasis, generic, insertion, paragraph, presentation, strong, subscript, or superscript.
From line 28, column 5; to line 28, column 59
`<div class="quote-banner" aria-label="FindMyPaw quote">`

(Error/s. 1-2) The image filename has a space within which is not the proper naming convention which can lead to technical errors.

This can be avoided by removing the space or replacing it with a dash (-).

(Error/s. 3) The aria-label attribute was added to a div where it is not allowed. This can be avoided by removing the aria-label or adding it to a suitable element.

login.html

- Error** Bad value Settings icon.png for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 16, column 13; to line 16, column 69
``
- Error** Bad value logo findmypaw.png for attribute src on element img: Illegal character in path segment. Space is not allowed.

11. **Error** An img element must have an alt attribute, except under certain conditions. For details, consult [guidance on providing text alternatives for images](#).
From line 188, column 29; to line 188, column 72
``
12. **Error** Bad value Contact us.jpg for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 212, column 29; to line 212, column 97
``
13. **Error** Bad value logo findmypaw.png for attribute src on element img: Illegal character in path segment. Space is not allowed.
From line 317, column 9; to line 317, column 59
``

(Error/s. 1-2, 6, 8, 10, 12-13) The image filename has a space within which is not the proper naming convention which can lead to technical errors.

This can be avoided by removing the space or replacing it with a dash (-).

(Error/s. 3-5, 7, 9, 11) There is no alt attribute to provide alternative information for the image, which makes the image less accessible for screen readers and not indexable.

This can be solved by adding the alt attribute within the tag like figure 1

```
<div class="nav-left">  
    
    
</div>
```

Figure 1 Alt attribute example

style.css

No errors but 4 warnings are found

Warnings (4)	
URI : style.css	
74	<code>auto</code> is not defined by any specification as an allowed value for <code>pointer-events</code> , but is supported in multiple browsers
1022	<code>:-webkit-backdrop-filter</code> is a vendor extension
1543	Same color for <code>background-color</code> and <code>border-color</code>
1768	The property <code>clip</code> is deprecated

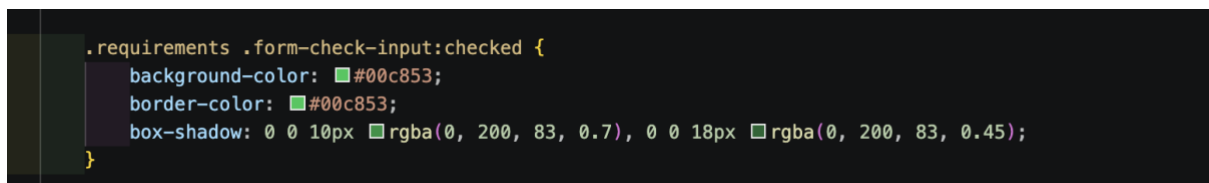

Warning 1:

The warning pops up because `pointer-events: auto;` is not standardised although still works in most modern browsers.

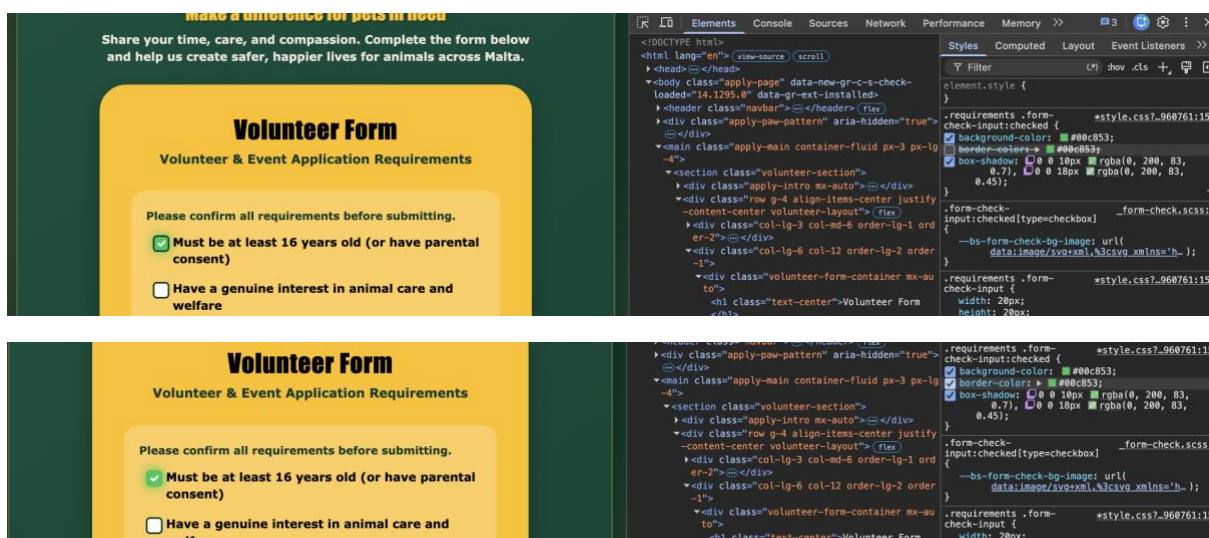

Warning 2:

caused by a vendor extension which is used for a specific browser in this example it is to improve compatibility with safari.

Warning 3:

Border colour off vs on

Could have been a stylistic choice. Warning is placed because it is likely for the border to blend with the background (which it does).

Warning 4:

Clip is an outdate CSS property, clip-path is the modern and standard alternative.

Suggestions

Visual Design

Improvements

The website does use an interesting colour, but it is way too saturated and intense which could cause eye strain.

A palette such as this could improve the visual design of the website. The background would make use of the off-white, teal as the primary and yellow as an accent colour. For a hover colour a darker version of the teal could be used. This new colour palette would enhance readability due to the high contrast and better visual hierarchy as the yellow can be used to direct attention to cta or warnings.

Strengths

The images used on the website are of high quality

The contact page uses a background image of a dog and cat behind the contact form. The contact form background is set at a lower opacity, so the page background image is still slightly visible. A glass blur effect and page load animation create a visually engaging and pleasing contact page

```
/* Glass panel */  
  
.contact-container{  
  width:1100px;  
  max-width:100%;  
  display:flex;  
  border-radius:28px;  
  overflow:hidden;  
  background:□ rgba(0, 0, 0, 0.38);  
  border:1px solid □ rgba(255, 255, 255, 0.14);  
  box-shadow:0 20px 50px □ rgba(0, 0, 0, 0.35);  
  backdrop-filter:blur(14px);  
  -webkit-backdrop-filter:blur(14px);  
  animation:fadeUp 5s ease;  
}
```

User Interface

Improvements

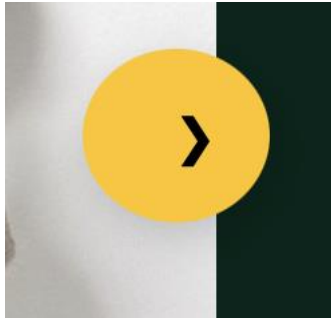

Every hover able button has a change colour effect. They also include extra hover effects such as drop shadow and scale but are not consistently styled with the same effect throughout

Buttons and fields should have the same styling throughout the entire website, so it is cohesive.

The footer is found in most of the website's pages, however, is absent in the homepage, this creates inconsistency in the interface. Although the login and create account pages also have an absent a footer it could be an intentional simplification (other website also do this) since the purpose of these pages is to login or register.

The brand logo is very small and not scalable which makes the navigation bar look disproportionate.

The logo set as white also creates legibility issues as it does not contrast well against the yellow background. Right now, the settings icon is the most visually dominant.

The right navigation arrow, has poor alignment compared to the left navigation arrow making the styling feel inconsistent

The notification carousel container is not set properly for the card scaling so the card gets cropped when hovered

Strengths

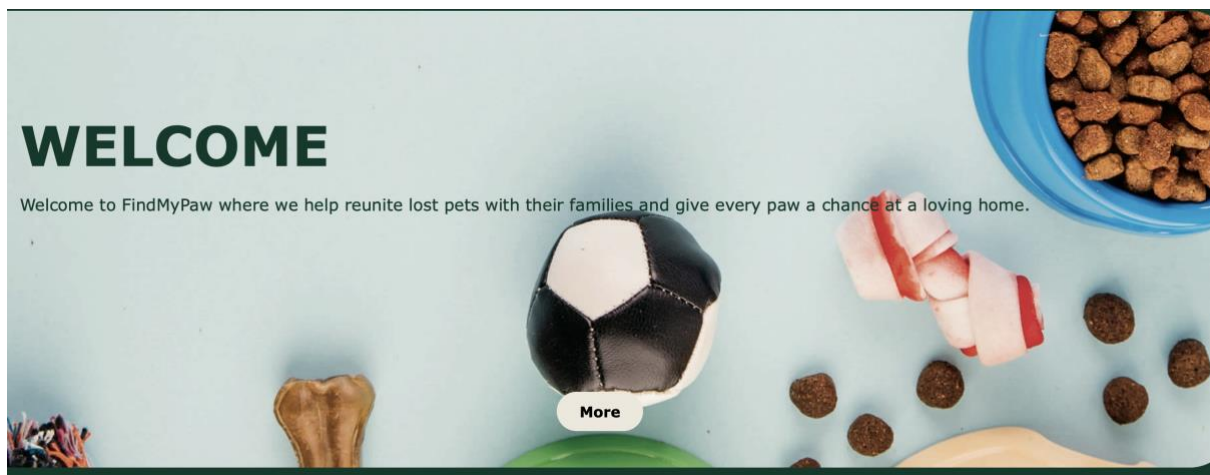

The scrolling banner found in the homepage has good spacing, and clearly communicates the websites message

The rounded corners on the visual elements such as fields, buttons and images makes the website inviting and friendly which suits the pet theme.

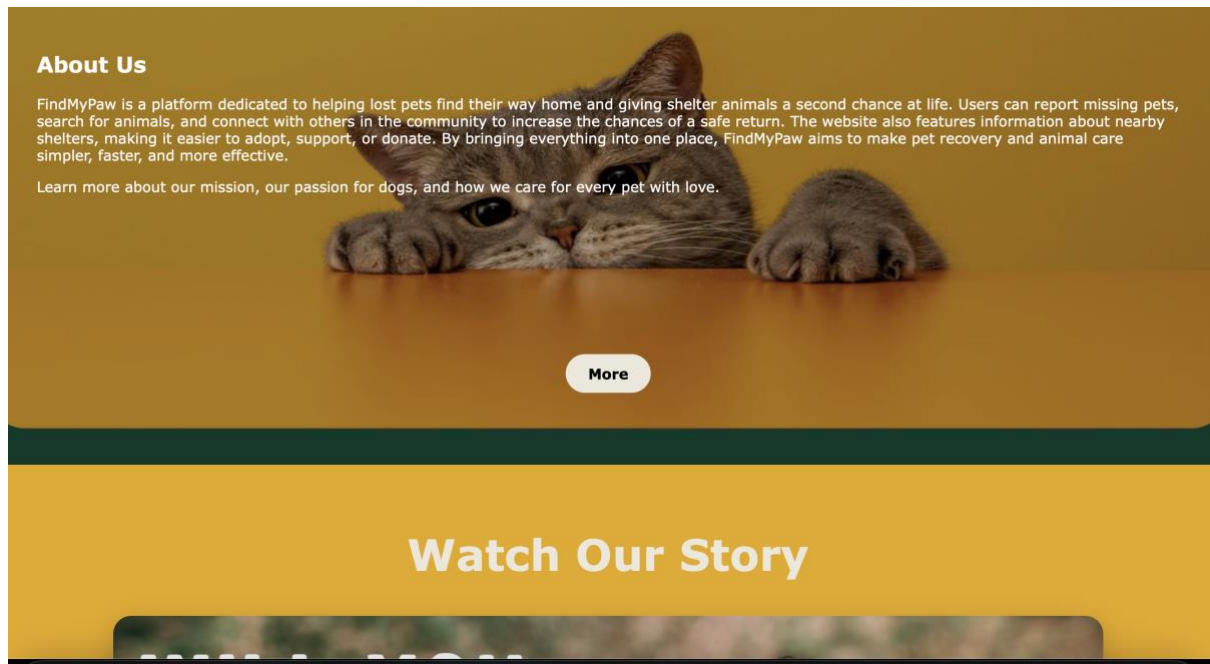

User Experience

Improvements

Buttons should have less vague names

The homepage cta button leads to the about us, so it would be better to rename the button to Learn More About Us or About Us, as it much clearer indicates its purpose/destination.

In the About us page, although more does work, it can be clearer like, [Learn More](#).

Missing Pet 🐾 🐾

Pet Name *

Type of Animal *

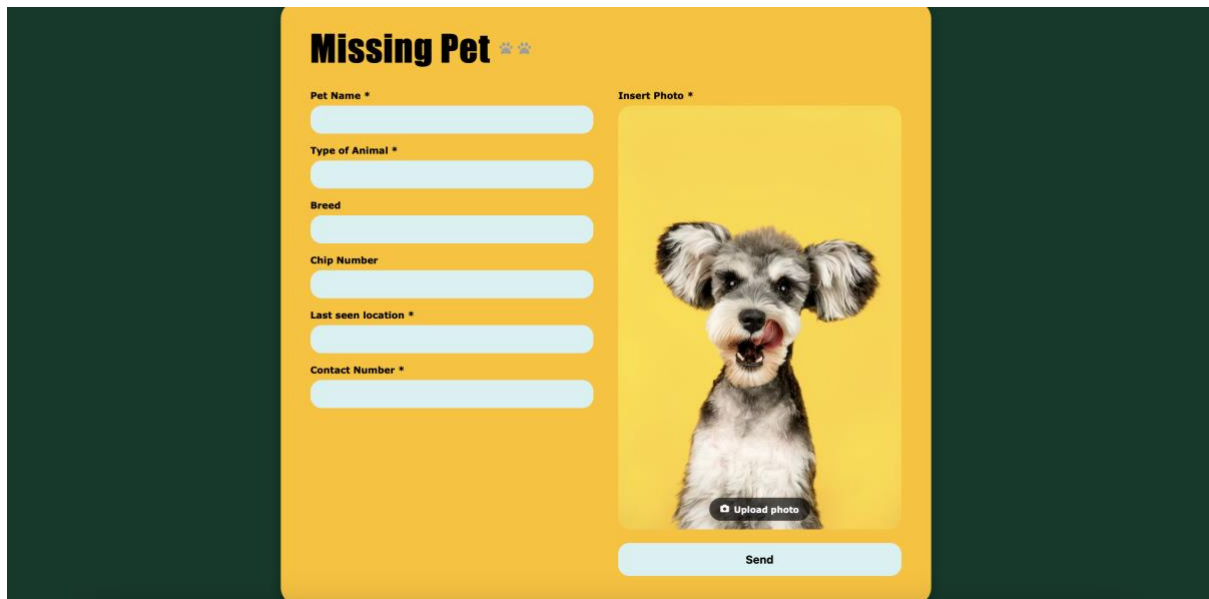

Breed

Chip Number

Last seen location *

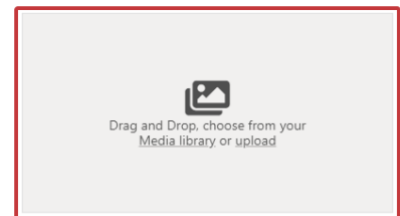

Insert Photo *

When entering the missing pet page this is what it looks like

This is the page zoomed out. The image upload card is very long, which causes the send button to be hidden at a normal screen size, which could confuse users. Adjusting the image box height until the button can be seen on screen would improve usability.

The image upload card could also be misinterpreted as decoration. Using a clearer placeholder image like this could also improve usability.

Alt text:

☐ Show Alt text as the article image caption

may be unclear, as the existing dog image could be mistaken for decorative content rather than an upload placeholder. A clearer upload interface would improve usability.

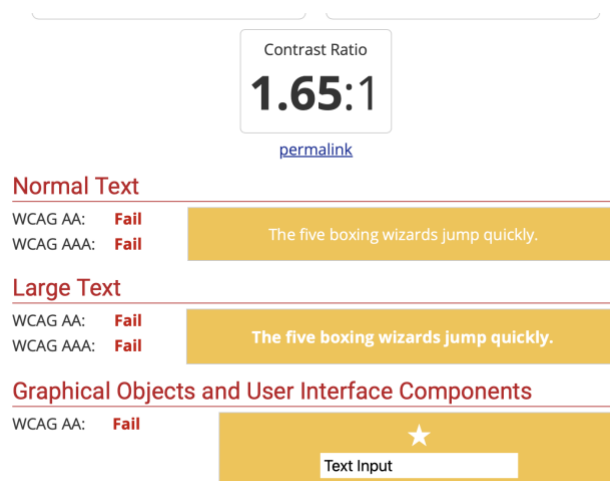

The contact us page load animation takes way too long to fully appear and finish the animation, which could reduce user engagement and make the website feel unresponsive. Reducing the animation duration to 1s would improve the flow and create a smoother user experience (tested 1s duration).

```
backdrop-filter:blur(14px);
-webkit-backdrop-filter:blur(14px);
animation:fadeUp 5s ease;
}
```

Since the website has “long” pages that a user must scroll through implementing a sticky navigation bar could improve user experience as the navigation bar is always accessible to the user, without having to scroll all the way up.

The website settings are placed at the top left of the navigation bar but normally the website settings are placed in the top right corner of the navigation bar which does not comply to Jakob’s law which could be a surprise or unusual to a user entering the website for the first time.

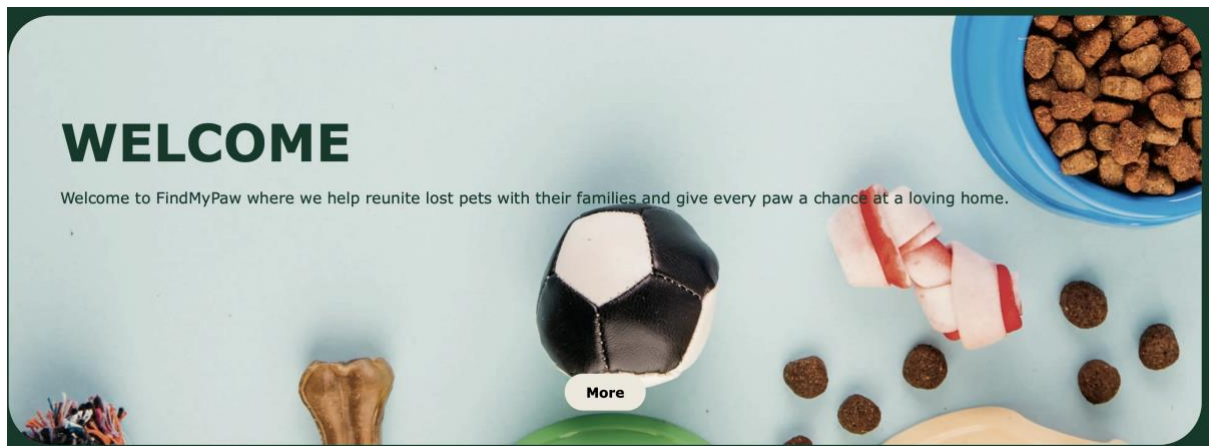

The navigation bar links hover colour is white which does not look very good and lacks contrast making the text illegible from a distance or smaller scale. Another reason why I would use the new colour palette.

The homepage and about us page both attempt at a hero section which consist of a headline, text, CTA button and a background image. These attempts lack contrast and readability.

Readability is affected due to the long line of text. This can be improved by decreasing the text containers width to break the paragraph into shorter lines, and specifically for the about us page could also decrease some words.

The background images do not have enough separation from the text which makes the text hard to read. This can be improved by adding a dark/light overlay.

Some pages were not very responsive due to a lack of column structure. Utilising a Bootstrap container, row, and columns would improve layout flexibility across different screen sizes.

The location of the office should have its own page or be included in the contact us page because a user won't expect it to be in the settings.

Normally inside of the settings you find preferences, account settings and language (like it does)

The login and register pages should still be accessible from the rest of the pages

Decorative elements that are not clickable have a hover effect, this gives the impression that it is an interactable element when it is actually not.

Strengths

The button and fields give visual feedback, such as

Buttons: when hovered they change colour, shift up or introduce a drop shadow. These styling effects show the user that they are interactable.

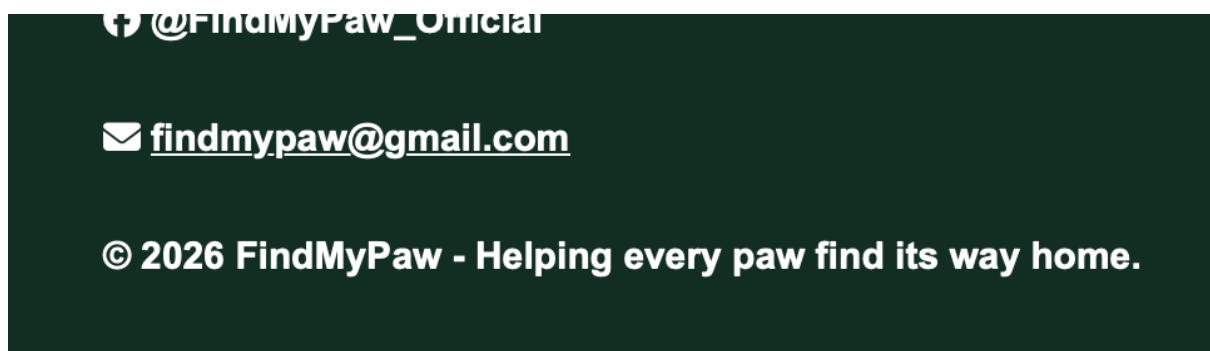

When a field is not filled out and the user presses the next button, the field border becomes highlighted, and a warning message pops up

This feedback makes the website feel more responsive

When the user clicks out of the settings overlay it collapses

The carousel indicators replace the disappeared arrows which allows for navigation when the website is used on a smaller screen

The email link in the footer is the only clickable link so the underline styling further implies this as an interactive element

When a page is selected it becomes underlined and slightly changes colour this helps users know what page they are on

Interactive elements are larger enough to click very easily on any screen size which follows Fitt's Law.

Functionality

Improvements

Adopt me page has unfinished links, meaning the page is not complete thus not functional.

```
<div class="shelter-grid">
  <a href="#" class="shelter-card">
    SPCA</strong>
  </a>

  <a href="#" class="shelter-card">
    MSPCA</strong>
  </a>

  <a href="#" class="shelter-card">
    Noah's Arc<br>Dog Sanctuary</strong>
  </a>

  <a href="#" class="shelter-card">
    AAA Malta</strong>
  </a>

  <a href="#" class="shelter-card">
    The Island<br>Sanctuary</strong>
  </a>
```

Although there was consideration to add a translation feature, it was not finished therefore not functional. Making this feature functional could improve functionality and accessibility.

Although required validation has been implemented in the fields. Some fields could have stronger validation through pattern validation. This would improve data accuracy and prevent any inputs from being incorrect.

This adoption card from the carousel could be clickable and lead to an adoption page like the adopt me page.

Strengths

Forms make use of required fields which ensure the needed data from a form is collected and the website has some sort of validation.

The email field uses `type="email"`, which helps users prevent inputting the incorrect email format.

The settings overlay opens and closes.

The missing pet form allows user to insert and preview their uploaded image, which is very useful.

Accessibility

Improvements

Some colour combination found throughout the website mainly concerning the hover able links in the navigation bar could create accessibility issues as there is very little contrast which could affect readability.

Strengths

The scrolling banner found in the homepage has a continuous scrolling animation, which is set at a reasonably speed which should not affect users who may be sensitive or read slow

There was an attempt to add a translation feature. This demonstrates consideration for multiple language accessibility and inclusivity. This could have been very beneficial to Maltese residents who lost their pet but are not fluent in English. Still not an accessibility feature but at least shows consideration.

Most of the images include alternative text.

Technical Implementation

In the working file there is no index.html, which is crucial for a website. The index.html file is used for the homepage of the website. If an index.html file is absent the server won't know which file to open.

As seen from the validation the images used in the website have spaces in the filename which is not the proper naming convention.

The file structure could be more organised, since multiple images are placed outside of the images folder that was created. Additionally, if the HTML, CSS, JavaScript and assets are separated by using individual folder would improve also maintainability.

Separating the CSS and JavaScript files from the HTML increases the reusability of code on multiple pages rather than repeating the same styling for every page.
